Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magnam aliquam quaerat voluptatem. Ut enim aequaleamus animo, cum corpore dolemus, fieri.

## **Quotation**

### **Short Quotation (fewer than 40 words)**

Effective teams can be difficult to describe because “high performance along one domain does not translate to high performance along another” (Ervin et al., 2018, p. 470)

### **Long Quotation (40 words or more)**

#### ***Block quotation with parenthetical citation***

Researchers have studied how people talk to themselves:

Inner speech is a paradoxical phenomenon. It is an experience that is central to many people’s everyday lives, and yet it presents considerable challenges to any effort to study it scientifically. Nevertheless, a wide range of methodologies and approaches have combined to shed light on the subjective experience of inner speech and its cognitive and neural underpinnings. (Alderson-Day & Fernyhough, 2015, p. 957)

#### ***Block quotation with narrative citation***

Flores et al. (2018) described how they addressed potential researcher bias when working with an intersectional community of transgender people of color:

Everyone on the research team belonged to a stigmatized group but also held privileged identities. Throughout the research process, we attended to the ways in which our privileged and oppressed identities may have influenced the research process, findings, and presentation of results. (p. 311)

## Computer code

The template has some support for raw/computer code, but if further customization is wanted, I recommend using [Codly](#).

### Code block

#### *Code block as a figure*

#### Listing 1

*Python code block*

```
def main():
    print("Hello, World!")
```

#### *Non-figure code block*

```
using System;

public class Program
{
    public static void Main(string[] args)
    {
        Console.WriteLine("Hello, World!");
    }
}
```

```
class MyClass
{
    public void MyMethod()
    {
        Console.WriteLine("Hello, World!");
    }
}
```

```
Console.WriteLine("Long line of code that exceeds the width of the page  
and needs to be wrapped to fit within the margins of the document.");
```

### *Parse file content*

```
def main():  
    print("Hello, world!")  
  
if __name__ == "__main__":  
    main()
```

### **Inline code**

Inline code can be inserted within a sentence, like this: `print("Hello, World!")`.

## Math Equations

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magnam aliquam quaerat voluptatem. Ut enim aequale doleamus animo, cum corpore dolemus, fieri tamen permagna accessio potest, si aliquod aeternum et infinitum impendere malum nobis opinemur. Quod idem licet transferre in voluptatem, ut..

Let  $a$ ,  $b$ , and  $c$  be the side lengths of right-angled triangle. Then, we know that:

### Equation 1

*Right-angled triangle*

$$a^2 + b^2 = c^2 \quad (1)$$

Prove by induction:

### Equation 2

*Sum of first  $n$  integers*

$$\sum_{k=1}^n k = \frac{n(n+1)}{2} \quad (2)$$

We define:

### Equation 3

*Golden ratio*

$$\phi := \frac{1 + \sqrt{5}}{2} \quad (3)$$

With Equation 3, we get:

### Equation 4

*Fibonacci number*

$$F_n = \left\lfloor \frac{1}{\sqrt{5}} \phi^n \right\rfloor \quad (4)$$

| Student                                       | 25               | 50 | 20                 | 40 | 23                | 46 | 68          | 45.3 |
| Self-employed                                 | 25               | 50 | 20                 | 40 | 23                | 46 | 68          | 45.3 |
| Retired                                       | 25               | 50 | 20                 | 40 | 23                | 46 | 68          | 45.3 |
| Previous psychological treatment <sup>a</sup> | 25               | 50 | 20                 | 40 | 23                | 46 | 68          | 45.3 |
| Previous psychotropic medication <sup>a</sup> | 25               | 50 | 20                 | 40 | 23                | 46 | 68          | 45.3 |

*Note.* N = 150 (n = 50 for each condition). Participants were on average 39.5 years old (SD = 10.1), and participant age did not differ by condition.

<sup>a</sup> Reflects the number and percentage of participants answering “yes” to this question.

### Sample Results of Several *t* Tests Table

Referencing Table B2.

**Table B2**

*Results of Curve-Fitting Analysis Examining the Time Course of Fixations to the Target*

| Logistic parameter                    | 9-year-olds |       | 16-year-olds |       | <i>t</i> (40) | <i>p</i> | Cohen's<br><i>d</i> |
|---------------------------------------|-------------|-------|--------------|-------|---------------|----------|---------------------|
|                                       | M           | SD    | M            | SD    |               |          |                     |
| Maximum asymptote, proportion         | 0.85        | 0.05  | 0.90         | 0.04  | 2.56          | .014     | .63                 |
| Crossover, in ms                      | 500         | 50    | 450          | 40    | 2.34          | .024     | .56                 |
| Slope, as change in proportion per ms | .002        | .0005 | .0025        | .0004 | 2.56          | .014     | .63                 |

*Note.* For each subject, the logistic function was fit to target fixations separately. The maximum asymptote is the asymptotic degree of looking at the end of the time course of fixations. The crossover point is the point in time the function crosses the midway point between peak and baseline. The slope represents the rate of change in the function measured at the crossover. Mean parameter values for each of the analyses are shown for the 9-year-olds ( $n = 24$ ) and 16-year-olds ( $n = 18$ ), as well as the results of *t* tests (assuming unequal variance) comparing the parameter estimates between the two ages.

### Sample Correlation Table

Referencing Table B3.

**Table B3**

*Descriptive Statistics and Correlations for Study Variables*

| Variable                                 | <i>n</i> | <i>M</i> | <i>SD</i> | 1      | 2      | 3    | 4     | 5 | 6 | 7 |
|------------------------------------------|----------|----------|-----------|--------|--------|------|-------|---|---|---|
| 1. Internal-external status <sup>a</sup> | 3,697    | 0.43     | 0.49      | -      | -      | -    | -     | - | - | - |
| 2. Manager job performance               | 2,134    | 3.14     | 0.62      | -.08** | -      | -    | -     | - | - | - |
| 3. Starting salary <sup>b</sup>          | 3,697    | 1.01     | 0.27      | .45**  | -.01   | -    | -     | - | - | - |
| 4. Subsequent promotion                  | 3,697    | 0.33     | 0.47      | .08**  | -.07** | .04* | -     | - | - | - |
| 5. Organizational tenure                 | 3,697    | 6.45     | 6.62      | -.29** | .09**  | .01  | .09** | - | - | - |

| Variable                                   | <i>n</i> | <i>M</i> | <i>SD</i> | 1      | 2      | 3     | 4     | 5    | 6     | 7 |
|--------------------------------------------|----------|----------|-----------|--------|--------|-------|-------|------|-------|---|
| 6. Unit service performance <sup>c</sup>   | 3,505    | 85.00    | 6.98      | -.25** | -.39** | .24** | .08** | .01  | -     | - |
| 7. Unit financial performance <sup>c</sup> | 694      | 42.61    | 5.86      | .00    | -.03   | .12*  | -.07  | -.02 | .16** | - |

<sup>a</sup> 0 = internal hires and 1 = external hires.

<sup>b</sup> A linear transformation was performed on the starting salary values to maintain pay practice confidentiality. The standard deviation (0.27) can be interpreted as 27% of the average starting salary for all managers. Thus,  $\pm 1$  SD includes a range of starting salaries from 73% (i.e.,  $1.00 - 0.27$ ) to 127% (i.e.,  $1.00 + 0.27$ ) of the average starting salaries for all managers.

<sup>c</sup> Values reflect the average across 3 years of data.

Referencing Figure C5.

**Figure C5***Organizational Framework for Racial Microaggressions in the Workplace***Sample mixed methods research figure**

Referencing Figure C6.

**Figure C6**

*A Multistage Paradigm for Integrative Mixed Methods Research*

### Sample illustration of experimental stimuli

Referencing Figure C7.

**Figure C7***Examples of Stimuli Used in Experiment 1*

*Note.* Stimuli were computer-generated cartoon bees that varied on four binary dimensions, for a total of 16 unique stimuli. They had two or six legs, a striped or spotted body, single or double wings, and antennae or no antennae. The two stimuli shown here demonstrate the use of opposite values on all four binary dimensions.
